

Muazzam Ali

Backend Engineer — GenAI Specialist

📞 (+91) 7668177718 — ✉️ muazzamali741@gmail.com — 🔗 linkedin.com/in/muazzamofficial — 🌐 github.com/Muazzam741

Professional Summary

Backend Engineer with experience in building high-concurrency systems handling **5x traffic spikes** and autonomous AI agents reducing manual work by **90%**. Proven: **25% latency reduction**, **30% cost optimization**, production-grade REST APIs, resilient caching strategies.

Professional Experience

Loyalty Juggernaut Inc.

April 2025 – Present

Product Engineer

- Reduced API latency by **25%** for 10,000+ daily users by engineering 15+ endpoints with **Django REST Framework** and optimizing complex **PostgreSQL** queries
- Enabled the system to handle **5x traffic spikes** during peak loads by architecting a sliding-window rate limiter and caching strategy using **Redis**, improving response times by **40%**
- Eliminated unauthorized access vectors by implementing strict domain whitelisting and IP-based access control middleware, significantly hardening the API security posture

Loyalty Juggernaut Inc.

Jan 2025 – April 2025

Product Engineer Intern

- Increased team sprint velocity by **15%** by delivering 12 production-ready features within 3 months through efficient Agile/Scrum development cycles
- Reduced direct database query load by **30%** by implementing a multi-layer caching mechanism using **Redis**, optimizing cloud infrastructure costs

Queuify

Feb 2024 – July 2024

Machine Learning Engineer Intern

- Achieved **85%** validation accuracy on predictive models by building end-to-end Machine Learning pipelines using **TensorFlow** and **Scikit-learn**
- Improved model performance by **20%** for core business cases by fine-tuning deep learning architectures using Transfer Learning techniques

Technical Skills

Backend Engineering: Python • Django/DRF • FastAPI • Celery • Flask • JWT/RBAC

Database & Caching: PostgreSQL (optimization, indexing) • Redis (patterns, rate limiting)

GenAI: LangChain • LangGraph • OpenAI API • HuggingFace • RAG Pipelines • Ollama • TensorFlow

Tools & Platforms: AWS • Git • GitHub • Postman • Docker

Technical Projects

DocuMind: SaaS Document Intelligence Platform — Django, Celery, Llama-3

- Multi-tenant SaaS backend handling **50+ concurrent file processing** with Llama-3 contract summarization + entity extraction
- 90% manual review time reduction** — 8-hour process → 30-minute workflow

Agentic Workflow Automation System — Python, LangGraph, OpenAI

- Developed an autonomous AI agent using **LangGraph** capable of executing multi-step workflows (Search → Analyze → Report) without human intervention
- Reduced hallucination rates by **60%** by implementing a "Self-Reflection" loop where the LLM critiques and refines its own output before final delivery

Distributed Inventory Management API — Django REST Framework, Redis, Docker

- Engineered a high-concurrency REST API with **Django** and **PostgreSQL**, utilizing **Redis** caching to maintain sub-100ms latency under high load
- Secured sensitive endpoints with Role-Based Access Control (RBAC) via JWT and achieved **100% test coverage** using PyTest for critical transaction workflows

Education

Maulana Azad National Urdu University, Hyderabad (A Central Government University)

July 2021 – April 2025

Bachelor of Technology in Computer Science

CGPA: 8.54/10.0

Certifications & Achievements

- Solved **230+ Data Structures & Algorithms** problems on LeetCode with **1,649** contest rating
- Machine Learning Specialization (Stanford) • MIT Computational Thinking
